

Basic Brm 8-24D-1B0 Relay Board

The **Basic BRM 8-24D-1B0 Relay Board** is an industrial-grade relay module designed for reliable switching of electrical signals in automation and control systems. Its sturdy construction and compatibility with 24V DC control systems make it ideal for diverse relay-based operations.

Key Features:

- **Manufacturer:** Basic Automation
- **Model:** BRM 8-24D-1B0 / BRM 8-24D-1Bo
- **Relay Type:** 58D-24-1C
- **Associated Part:** BA8-1 Brisk 030512
- **Control Voltage:** 24V DC
- **Weight:** 380 Gm

Description:

Built to ensure dependable performance in demanding industrial settings, the Basic BRM 8-24D-1B0 relay board features multiple channels for signal switching and control. The board integrates seamlessly into control panels and PLC interfaces, handling a variety of load types while maintaining electrical isolation. With clearly labeled terminals and robust relay components, this module simplifies installation and ensures long-term service reliability in automation systems.
