

## Abb Fis-3A Supply Board

### ABB FIS-3A Supply Board

The ABB FIS-3A Supply Board is a high-performance electronic module designed to deliver stable and efficient power supply functions within ABB automation and control systems. Identified under part number 3ADT312111P2201, this board integrates critical power electronics for reliable performance, featuring components like the Semikron Semitrans SKD 75 GAL 123 D 16 power module. This robust combination ensures compatibility with various ABB industrial systems.

#### Key Specifications:

- **Manufacturer:** ABB
- **Model:** FIS-3A Supply Board
- **Part Number:** 3ADT312111P2201
- **Component Integration:** Includes Semikron Semitrans SKD 75 GAL 123 D 16
- **PCB ID:** FIS-3
- **Additional Identifiers:** L2 02430, 203609
- **Weight:** 230 grams

#### Product Overview:

Built for demanding industrial environments, the ABB FIS-3A board ensures consistent power delivery and protection for connected systems. It is engineered to integrate seamlessly within larger automation frameworks and power conversion setups. Its compact design, durable build, and trusted ABB quality make it a dependable choice for OEM replacements and system maintenance in factory automation or energy infrastructure applications.
