

## **Autronica Kmc-234 Channel Unit Card**

The Autronica KMC-234 Channel Unit Card is a specialized electronic module designed for precise control and monitoring in fire detection and safety systems. Manufactured by Autronica, this channel unit card is engineered to deliver reliable performance in critical safety applications, ensuring accurate signal processing and communication within the control panel. With delay settings Dly A 255 and Dly B 255, the KMC-234 offers configurable timing to suit various system requirements. Its compact and lightweight design facilitates easy installation and integration into existing safety infrastructure.

### **Key Features:**

- Designed for reliable signal processing in fire detection and safety control systems
- Configurable delay settings (Dly A 255, Dly B 255) for tailored system response times
- Compact and lightweight for convenient installation and integration
- Manufactured to meet stringent quality and safety standards
- Ensures consistent and accurate communication within Autronica control panels

### **Specifications:**

- Model: KMC-234 Channel Unit Card
- Manufacturer: Autronica
- Part Number: 7251-044.0001

- Delay Settings: Dly A 255, Dly B 255
- Weight: 100 grams

The Autronica KMC-234 Channel Unit Card is an essential component for enhancing the performance and reliability of fire detection systems. Trusted by safety professionals worldwide, this card delivers dependable operation to support effective monitoring and protection in critical environments.
