

## AMOT 47326X 47685X150

The AMOT 47326X 47685X150 is a high-quality temperature control valve assembly engineered to deliver precise thermal regulation in a variety of industrial and engine-based applications. Manufactured by AMOT, a trusted name in control systems and thermal management, this assembly is designed to maintain optimal operating temperatures, enhancing system efficiency and protecting sensitive equipment from overheating or thermal stress.

Built with robust materials and crafted to exacting standards, the AMOT 47326X 47685X150 offers dependable performance even under demanding operating conditions. It is well-suited for use in engines, compressors, turbines, and hydraulic systems where accurate temperature control is essential for reliability and longevity. The valve assembly incorporates advanced design features to ensure responsive actuation and minimal pressure drop, supporting stable thermal performance across a wide temperature range.

The AMOT 47326X 47685X150 is engineered for ease of integration into both new and existing systems. Its compact and durable construction ensures it can withstand harsh environments, including high-vibration settings and fluctuating thermal loads. The valve operates automatically based on fluid temperature, ensuring consistent flow control without the need for manual intervention or additional power sources.

With the AMOT 47326X 47685X150, operators benefit from reduced maintenance requirements and enhanced system uptime. It supports a broad array of applications across the marine, power generation, and oil and gas industries. By incorporating this advanced valve assembly into your thermal management system, you ensure precise control, improved energy efficiency, and long-term equipment protection backed by AMOT's legacy of innovation and reliability.
