

098-06437-01 Ac Master Board E213371

The **098-06437-01 AC Master Board** is a vital component designed for use in advanced power control and distribution systems. Built to manage and regulate AC power operations, this master board ensures reliable performance and precision in high-demand environments. With multiple part references and high-grade construction, it serves as a central control unit in systems where accurate AC management is essential.

Key Features:

- High-performance AC master board for power regulation and control
- Designed for integration with Mastervolt systems and similar architectures
- Includes filter board functionality for noise reduction and signal clarity
- Built to 94V-0 standards for flame resistance and durability
- Suitable for marine, industrial, and backup power applications

Specifications:

- Product Name: AC Master Board
- Part Numbers: 098-06437-01, 06438-06P-1002384911, 618-04247-04
- Additional Parts: 098-06433-00 Mastervolt Filter Board, P/N: 06482-00P
- Board Markings: E213371, E303981, AOH-2

- Wire Type: W3 AWG 18
- Construction: Multi-layer PCB, 94V-0 rated
- Application: AC power control, distribution systems, filter integration
- Weight: 570 grams

The **098-06437-01 AC Master Board** offers robust and stable AC power control, making it an essential part of systems requiring high reliability and safety. Engineered for demanding conditions, it reflects the precision and dependability expected in modern power management solutions.
