

## **D"-25D<sup>3</sup>-D-25G Dc Electric Motor**

The **D-25G DC Electric Motor** is a compact and reliable direct current motor designed for use in precision equipment and industrial machinery. Identified by model **D-25Г (D-25G)** and serial number **N: 28271 0989**, this motor delivers consistent rotational performance and is built to withstand demanding operational conditions. Its robust construction and efficient output make it suitable for applications requiring stable speed and torque control.

### **Key Features:**

- Compact design suitable for integration into various industrial systems
- Stable and reliable DC motor operation for continuous-duty applications
- Ideal for use in automated control systems, instruments, and legacy equipment
- Durable construction ensures longevity under harsh operating environments
- Manufactured to precision standards for consistent performance

### **Specifications:**

- Model: D-25Г / D-25G
- Motor Type: DC Electric Motor
- Serial Number: 28271 0989
- Application: Industrial and instrumentation use

- Weight: 810 grams

The **D-25G DC Electric Motor** stands out as a dependable choice for engineers and technicians working with legacy or custom-built control systems. Its time-tested performance and compact footprint make it a preferred option for retrofits, repairs, or new installations where DC motor functionality is required. Designed for reliability and consistent output, this unit upholds the quality standards associated with precision electromechanical components.
