

## **Abb A30-30-32 Auxiliary Contact Block**

The ABB A30-30-32 Auxiliary Contact Block is a compact and reliable accessory designed to enhance control circuit functionality in industrial automation and electrical systems. This auxiliary contact block is engineered to provide additional contact points for signaling and interlocking purposes when used alongside ABB contactors and motor starters. Its robust construction ensures dependable performance in demanding operational environments, making it an essential component for complex control panel assemblies.

### **Key Features:**

- Provides auxiliary contacts for expanded control circuit capabilities
- Designed for seamless compatibility with ABB contactors and motor starters
- Compact and durable construction for reliable industrial use
- Facilitates improved signaling and interlocking in automation systems
- Lightweight design enables easy installation and integration

### **Specifications:**

- Product Type: Auxiliary Contact Block
- Model: A30-30-32
- Weight: 60 grams
- Manufacturer: ABB

The ABB A30-30-32 Auxiliary Contact Block delivers reliable and efficient performance as part of ABB's comprehensive control component range. Its quality design and compatibility make it a preferred choice for professionals seeking to optimize control system functionality in industrial applications.
