

## **Avl 4630L03 Pneumatic Board**

The **AVL 4630L03 Pneumatic Board** is a precision-engineered control module designed for pneumatic system management in industrial automation and process control applications. This Rev2 version of the 4630L03 board offers enhanced reliability and performance, facilitating accurate control and monitoring of pneumatic actuators and valves. Built with high-quality materials and compliant with industry standards, it ensures stable operation in demanding environments.

### **Key Features:**

- Controls and interfaces with pneumatic actuators and valves
- Designed for robust industrial automation applications
- Manufactured with durable components for long-term reliability
- Revision 2 board with improved functionality and stability
- Complies with flame-retardant 94V-0 PCB standards

### **Specifications:**

- Manufacturer: AVL
- Model: 4630L03
- Revision: Rev2
- PCB Standard: 94V-0

- Part Codes: 5B, BB0728, 0965 AJCC
- Weight: 70 grams

The **AVL 4630L03 Pneumatic Board** delivers dependable control performance essential for precision pneumatic automation systems. Its rugged design and compliance with strict quality standards make it a trusted choice for engineers and technicians aiming to optimize pneumatic control in industrial processes.
